| Topics | What students need to learn: |  |  |
| :---: | :---: | :---: | :---: |
|  | Content |  | Guidance |
| 5 <br> Trigonometry | 5.1 | Understand and use the definitions of sine, cosine and tangent for all arguments; the sine and cosine rules; the area of a triangle in the form $\frac{1}{2} a b \sin C$ | Use of $x$ and $y$ coordinates of points on the unit circle to give cosine and sine respectively, <br> including the ambiguous case of the sine rule. |
|  | 5.2 | Understand and use the sine, cosine and tangent functions; their graphs, symmetries and periodicity. | Knowledge of graphs of curves with equations such as $y=\sin x$, $y=\cos \left(x+30^{\circ}\right), y=\tan 2 x$ is expected. |
|  | 5.3 | Understand and use $\tan \theta=\frac{\sin \theta}{\cos \theta}$ <br> Understand and use $\sin ^{2} \theta+\cos ^{2} \theta=1$ | These identities may be used to solve trigonometric equations or to prove further identities. |
|  | 5.4 | Solve simple trigonometric equations in a given interval, including quadratic equations in sin, cos and tan and equations involving multiples of the unknown angle. | Students should be able to solve equations such as $\begin{aligned} & \sin \left(x+70^{\circ}\right)=0.5 \text { for } 0<x<360^{\circ} \\ & 3+5 \cos 2 x=1 \text { for }-180^{\circ}<x<180^{\circ} \\ & 6 \cos ^{2} x^{\circ}+\sin x^{\circ}-5=0,0 \leqslant x<360^{\circ} \end{aligned}$ <br> giving their answers in degrees. |
