Section B (36 marks)

8 Fig. 8 shows part of the curve $y = x \sin 3x$. It crosses the x-axis at P. The point on the curve with x-coordinate $\frac{1}{6}\pi$ is Q.

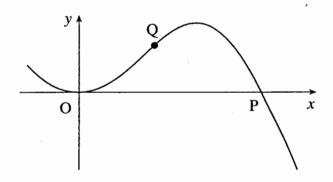

Fig. 8

(i) Find the x-coordinate of P.

[3]

(ii) Show that Q lies on the line y = x.

[1]

(iii) Differentiate $x \sin 3x$. Hence prove that the line y = x touches the curve at Q.

[6]

(iv) Show that the area of the region bounded by the curve and the line y = x is $\frac{1}{72}(\pi^2 - 8)$. [7]

[Turn over

9 The function $f(x) = \ln(1 + x^2)$ has domain $-3 \le x \le 3$.

Fig. 9 shows the graph of y = f(x).

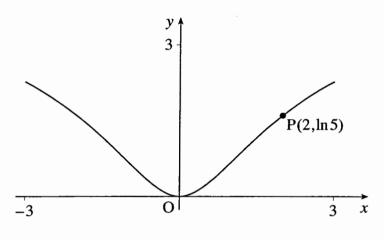

Fig. 9

(i) Show algebraically that the function is even. State how this property relates to the shape of the curve. [3]

(iii) Explain why the function does not have an inverse for the domain $-3 \le x \le 3$.

The domain of f(x) is now restricted to $0 \le x \le 3$. The inverse of f(x) is the function g(x).

(iv) Sketch the curves y = f(x) and y = g(x) on the same axes.

State the domain of the function g(x).

Show that
$$g(x) = \sqrt{e^x - 1}$$
. [6]

(v) Differentiate g(x). Hence verify that $g'(\ln 5) = 1\frac{1}{4}$. Explain the connection between this result and your answer to part (ii). [5]
